## PROJECTS

### 1. Neo7Logix

#### Description:

Neo7logix designs unique personalized patient edited sequences (PES) with highly specific delivery, these sequences can be more than 4 billion (really big number) possible combinations. We have designed a platform which can manage process of the company starting from collecting sample of patients till manufacturing personalized vaccine based on patient's disease.

### 2. PEXit

#### Description:

PEXit combines the functionalities of social media, professional media, and e-commerce; it is designed for B2B (Business-to-Business) and B2C (Business-to-Consumer) users of varied profiles to connect with their peers, associates, partners, and customers. communicate with them by messaging, and sharing photos, videos, drawings, reports, and presentations. collaborate with team members of projects by forming user-specified groups. conduct commerce on products, services, software, etc., and choose career by posting resumes and searching job openings. Understanding the requirement and Developed UI of the web application

### 3. Story Wars Talk

#### Description:

This project is related to organizing events. Users can organize events and can schedule them. Event members must tell stories when the event is going on. Overall, in this project events can be upcoming, ongoing, and completed, for this corresponding page had to make and linked it accordingly.

**Roles and Responsibilities:** I was asked to design pages like login, signup forms, various events pages, member lists, user profiles etc. I have designed the UI of this project in React JS using HTML, CSS, Bootstrap, Material UI etc.

### 4. Sales and Utility

#### Description:

This project contains forms in which users give their details and ask queries. After that Submitted forms should be listed in tables.

**Roles and Responsibilities:** I asked to design UI and integrate API for contact form. I have designed UI in React JS using bootstrap and used formic libraries to control the form data.
